HAVI AFP Solutions

Getting print data streams on track.

AFP Solutions is a highly scalable software solution to record, separate, convert, distribute and archive digital voucher and print data streams in batch mode.

It is mainly used by companies that process high-volume voucher and print data streams, for instance as a solution in energy corporations, banking houses, large print companies, telecommunications providers, data centre operators and insurance companies, all of whom have stringent requirements as concerns the ideal handling of digital print and voucher data.
Companies come to appreciate the opportunity to offer their customers the comfortable access to their personal documents such as invoices, account statements or policies, as AFP Solutions enables processing without any restrictions.

AFP Solutions consists of three separate modules, each suitable for use independently: AFPSEP for separation, AFPAI for classification and indexing and AFP2ANY for conversion. Please contact us for further information.

"We were looking for a ready-made and proven solution for the AIX platform that was scalable and could be combined with the latest Oracle methods. No other product could meet these criteria". — Jens Konradt, comdirect bank AG

HAVI AFP Solutions at a glance

- automatic separation of incoming vouchers
- automatic metadata extraction and classification
- faithful rep production of widely used standard formats (PDF, PDF/A, PS, TIFF, JPEG)
- intelligent AFP resource management
- simple integration within the existing IT landscapes
- individual configuration options
- processing of complex document structures
- barcode support
- use of substitution in AFP character sets
