

Data Migration

Migration with 360° service. Audit-proof and fast.

Although professional implementation of data migration is a crucial aspect to safeguard ongoing operations, experience shows that precisely this topic is quite often underestimated during the planning of IT projects. It necessitates comprehensive fulfilment of the fundamental requirements completeness, identity, retrievability and traceability.

This is why you should place your data migration in the sure hands of an experienced partner. We are one of the leading, vendor-independent specialists for program and data migration in Europe since 1994, clocking over 600 successfully implemented projects. Our special migration method, time-proven in hundreds of projects, allows us to migrate extremely large and/or complex datasets to your new system, on time and within the budget. Our extraction expertise extends to all

established systems (BetaSystems, Ceyoniq, COI, d.velop, DocuWare, EASY, ELO, EMC Documentum, GFT Hyparchiv, IBM FileNet, IBM ContentManager, OpenText, IQDoQ HyperDoc, Mobius, OnBase, Optimal Systems, Saperion, SER and many more). Alternatively, HAVI provides the storage connector to migrate truly monolithic archives in the double-digit terabyte range.

At HAVI, migration means a one-stop solution. We take the entire project implementation off your hands – starting with extensive consulting to match your technical, organisational and scheduling requirements, moving on to actual migration implementation and through to consolidation and/or optimisation of the archive and index structure within your system. Please contact us for more information.

Good reasons for a data migration with HAVI

- program and data migration expertise since 1994
- established as one of the leading migration service providers in Europe
- a 100% successful track record in over 600 migration projects
- expertise in extraction across all established systems
- primarily large clients from the insurance, banking, energy and industrial sectors
- certified quality management system according to ISO 9001
- certified information security system according to ISO 2700
