

# HAVI-Langzeitarchiv®

## Resource-saving long-term archiving

HAVI-Langzeitarchiv® makes it possible to store complete archives, such as annual archives or selected archive holdings, on self-supporting media and/or to store them permanently on magnetic disks with only little effort. A real alternative to conventional archiving.

Conventional long-term archives, for example on microfilm or microfiche, cannot offer fast access to documents, are cost-intensive and cumbersome to handle. With increased functionality and low costs, the advantages of an electronic long-term archive are evident here.

HAVI-Langzeitarchiv® provides you with an intuitive and easy-to-use system for today's and tomorrow's requirements for storing and archiving a wide variety of document types and print output. It relieves the load on the archive server and avoids cost-intensive storage expansion.

The long-term archive is not only suitable for the day of the tax audit, but also for older archives, which are no longer regularly researched and therefore do not have to be constantly available online.

Using HAVI-Langzeitarchiv® eases the strain on the archive server and prevents costly storage upgrades.

## HAVI-Langzeitarchiv® at a glance

- use of standard file systems
- access across operating system functions
- supports DVD, CD and WORM/MO as self-contained media
- research conducted using several keywords
- support of background information and annotations
- document export
